HERMES NETWORK

SOFTWARE DEFINED WAN (SD-WAN)

- # LOWER YOUR COSTS
- # SECURE YOUR ENTERPRISE
- # CONTROL YOUR TRAFFIC

Hermes Network SD-WAN

Hermes Network enables the performance, compliance, security, and agility you need to integrate business applications deployed anywhere, connected over any Internet transport. The SD-WAN service deploys in minutes, with just a few easy steps and offers a scalable model to support deployments with a large number of branch offices. The Hermes Network SD-WAN service replaces multiple devices in your network. It supports critical functions such as Firewall, NAT, Routing, VRFs, VPN, DHCP, and IPsec termination. It provides full visibility into both on-site and cloud applications, and support application policies to secure and conall WAN traffic from one centralized dashboard.

Features and Benefits

✓ **Dynamic Multi-path Optimization**
Our solution provides real-time traffic steering over any broadband or MPLS link based on your defined policy

✓ **Packets Replication and Remediation**
Our patent pending technology will improve your critical applications such as voice and video

✓ **Application Acceleration & WAN Aggregation**
Aggregate all your broadband bandwidth to deliver super fast connection with application priorities

✓ **Cloud VPN**
Easily provisioning site-to-site VPN connects corporate branches securely

SIMPLE AND FAST BRANCH DEPLOYMENT

DEVICE CONSOLIDATION

CENTRAL CONTROL & VISIBILITY
